

# *The Collection of Topics which Comprise Fire Protection Engineering*

*FCIA*

*Key Biscayne, FL*

*November 12, 2009*

**Jim Milke, Professor and Assoc. Chair**

**Department of Fire Protection Engineering**

**University of Maryland**

# U.S. FPE Degree Programs

- ❖ University of Maryland
  - B.S., M.S., M.Eng., Ph.D.
- ❖ Worcester Polytechnic Institute
  - M.S., Ph.D.

# University of Maryland FPE Programs

| Degree                         | Number of credits                                                     | Time (years) |
|--------------------------------|-----------------------------------------------------------------------|--------------|
| Bachelor of Science (B.S.)     | 122                                                                   | 4-5          |
| Master of Science (M.S.)       | B.S. + 30 (including thesis)                                          | 1-2          |
| Master of Engineering (M.Eng.) | B.S. + 30 (no thesis)                                                 | 1.5-3        |
| Doctor of Philosophy (Ph.D.)   | B.S. + 60<br>(done in cooperation with other engineering departments) | 4-6          |

# History of UMD FPE Department

- ❖ 1956 – B.S. program initiated by Dr. John L. Bryan
- ❖ 1962 – 1<sup>st</sup> B.S. graduate (936 graduates)
- ❖ 1976 – B.S. program 1<sup>st</sup> accredited by ABET
- ❖ 1990 - Graduate program initiated
- ❖ 1992 - 1<sup>st</sup> M.S. graduate (151 graduates)
- ❖ 1995 - 1<sup>st</sup> M. Eng. Graduate (86 graduates)
- ❖ 1998 - 1<sup>st</sup> Ph.D. awarded (17 graduates)
- ❖ 2003 – Distance option for M. Eng. initiated

# Current Enrollment (approximate)

---

- ❖ B.S. – 130 students
- ❖ M.S. – 20 students
- ❖ M.Eng. – 60 students (10 on-campus, 50 distance)
- ❖ Ph.D. – 10 students

# Full-time Faculty

- ❖ Marino di Marzo, Professor and Chair
  - Suppression, Fire fighter safety
- ❖ Jim Milke, Professor and Associate Chair
  - Detection; Structures; Egress; Smoke management
- ❖ Jim Quintiere, John L. Bryan Professor
  - Fire dynamics; Scaling; Flammability
- ❖ André Marshall, Associate Professor
  - Fire flows; Combustion; Suppression
- ❖ Arnaud Trouvé, Associate Professor
  - Turbulent Combustion; Fire modeling
- ❖ Peter Sunderland, Assistant Professor
  - Soot; Hydrogen; Diagnostics; Vehicles

# BS Degree: Mission

## ❖ Graduates should

- Have the ***technical knowledge and skills needed to practice fire protection engineering*** locally, nationally and internationally in a variety of modern professional settings
- Have the ***basic competencies needed to pursue advanced studies*** in fire protection engineering or related fields
- Have the ability to ***understand and communicate societal, environmental, economic and safety implications*** of engineering decisions on the local and global communities
- Are prepared to attain ***professional certification and licensure***
- Appreciate the need to ***maintain continual professional competency and to practice ethically.***

# BS Program

## ❖ 122 credits total

- 24 credits general education  
(writing/communication, literature, history, arts, social sciences)
- 30 credits math, physics, chemistry
- 15 credits engineering fundamentals
- 38 credits fire protection engineering
- 15 credits math and engineering electives

# Engineering Fundamentals

---

- ❖ Statics
- ❖ Mechanics
- ❖ Dynamics
- ❖ Fluid Mechanics
- ❖ Thermodynamics
- ❖ Heat Transfer

# Fire Protection Engineering

- ❖ Fire Phenomena
- ❖ Response to Fire

# Fire Phenomena

---

- ❖ Experimental fire assessment methods
- ❖ Fire dynamics
- ❖ Computer modeling (zone and CFD)

# Experimental Fire Assessment methods

- ❖ Perform experiments following standard test methods and ad hoc methods involving material burning behavior and suppression

*ASTM E648 carpet test*

*1/20<sup>th</sup> scale test of  
World Trade Center*

*ASTM E1321  
ignition test*

# Fire Dynamics

- ❖ Introduction to premixed and diffusion flames
- ❖ Ignition
- ❖ Flame spread and rate of burning
- ❖ Combustion products
- ❖ Fire plumes
- ❖ Flame radiation.

# Fire Dynamics

# Fire Modeling

- ❖ Computer-based fire modeling applications to explore enclosure fire development.
- ❖ Development of computational methods to review aspects of enclosure fires (ceiling jets, smoke layer development, onset of flashover, etc.)
- ❖ Application of models – FAST, FDS.

# Fire Modeling

Frame: 0

Time: 0.1

# Response to Fire

---

- ❖ Life safety analysis
- ❖ Suppression systems
- ❖ Detection and alarm systems
- ❖ Structural fire protection
- ❖ Smoke management
- ❖ Hazard and risk analysis

# Life safety analysis

- ❖ Introduction to fire protection engineering and building regulation, building safety systems, and egress system design.
- ❖ Evacuation modeling. Human behavior in fires. Tenability analysis.
- ❖ Building survey (Life Safety Code)

*NFPA 101*

# Evacuation Analyses

*FEMA Report of WTC*

*The Station Fire*

*SFPE Handbook of Fire  
Protection Engineering*

# Special Hazard Suppression Systems

- ❖ Study of gaseous and particulate fire suppression systems.
- ❖ Examination and evaluation of code criteria, performance specifications and research.
- ❖ Design special hazard system (with detection) for actual hazard
  - Aircraft hangar
  - Clean room
  - Computer room
  - Museum space

# Water-based Suppression Systems

- ❖ Review characteristics of sprinkler systems: response time, suppression effectiveness.
- ❖ Design of sprinkler system for selected hazard
- ❖ Water mist systems

# Detection and Alarm Systems

- ❖ Design of detection components – location of initiating devices (heat, smoke , flame detectors), response time
- ❖ Alerting – methods, location of devices

# Response of Detectors

Sensitivity of detector

- *Specific to fuel*
- *Specific to angle*

Transmission through air

- *Intensity varies with  $1/d^2$*
- *Transmissivity of air*

Radiant heat output from fire

- *Heat release rate of fire*
- *Radiant fraction*
- *Area of flame envelope*

# Structural Fire Protection

- ❖ Standard tests to assess fire resistance
- ❖ Effects of elevated temperatures on structural materials

# Structural Fire Protection

- ❖ Analytical methods to evaluate fire resistant design of structures
- ❖ Computer simulation of response of structural elements

# Smoke Management

- ❖ Smoke movement characteristics
- ❖ Analyze performance of smoke management systems
  - Stairwell pressurization
  - Zoned smoke control
  - Smoke management systems in atria and covered malls

# Smoke Management

## ❖ Analysis methods for design

# Hazard and risk analysis

- ❖ Application of systems analysis, probability theory, engineering economics, and risk management
- ❖ Methods to develop criteria for the design, evaluation and assessment of fire safety or component hazards.

Analysis of upholstered furniture fires

# Hazard and Risk Analysis

## ❖ Capstone Course

- Integrates material from all other courses
- Project in course involves development of appropriate fire protection strategy for selected hazard
  - Fire safety in single family residences
  - Protection of computer rooms
  - Dormitory fire safety
  - LNG Storage

# SFPE PBD guide

# Capstone Project

## ❖ Follow SFPE Performance-Based Design Guide

- Analyze whether selected fire protection strategies satisfy performance criteria
- Performance criteria address
  - Level of risk
  - Cost-benefit or cost effectiveness

# Special Programs/Options

---

- ❖ Internships
  - On- or off-campus
- ❖ Co-op education
- ❖ Study abroad
- ❖ Hinman CEO (living-learning entrepreneurship program)
- ❖ Quest (innovation, quality systems management and teamwork, joint program with business school)

# Undergraduate Scholarship Support

## ❖ Sources

- Endowed scholarships
- One-time or annual gifts
- Outside Sources

*\$152,450 in 2008-2009*

## ❖ FCIA: Thank you!

# Master of Science

- ❖ Program seeks to explore advanced principles of fire protection engineering; development of analytical tools
- ❖ Requires 30 credits (24 credits of coursework + thesis)
- ❖ Approximately 10 M.S. graduates per year
- ❖ M.S. Theses since 2003 posted online:
  - <http://www.fpe.umd.edu/research/index.html>

# Master of Engineering

- ❖ Established M. Eng. Distance Program – Fall 2003
  - *Designed to help professionals hone their skills and advance their careers while studying on a part-time basis*
  - *Focus on the latest performance-based building fire safety analysis and design*
  - *Coursework can be completed in 15 months*
- ❖ 2 courses offered per term, 4 terms per year (each term is 12 weeks long)
- ❖ No thesis

# FPE Graduate Courses

| Course                                              | On-campus | Distance |
|-----------------------------------------------------|-----------|----------|
| Fire Induced Flows                                  | X         |          |
| Human Response to Fire                              | X         | X        |
| Fire Dynamics Laboratory                            | X         |          |
| Analytical Procedures of Structural Fire Protection | X         | X        |
| Fire Protection Engineering Hazard Analysis         | X         |          |
| Advanced Fire Modeling                              | X         | X        |
| Smoke Detection & Management                        | X         | X        |
| Advanced Fire Dynamics                              | +         | X        |
| Fire Assessment Methods                             |           | X        |
| Advanced Fire Suppression                           | ++        | X        |
| Forensic Fire Analysis                              | ++        | X        |
| Performance-based Design                            | +         | X        |
| Advanced Fire Risk Modeling                         |           | X        |
| Diffusion Flames and Burning Rate Theory            | X         |          |

# Distance Faculty

- ❖ Jim Milke, Ph.D., P.E., Prof. & Director - *Smoke Detection & Management*
- ❖ Arnaud Trouvé, Associate Professor, Ph.D. – *Advanced Fire Modeling*
- ❖ Adjunct Faculty
- ❖ Douglas Carpenter (Maryland) – *Fire Dynamics*
- ❖ Steven Gwynne, Ph.D. (Colorado & UK) – *Human Response to Fire*
- ❖ Morgan Hurley, P.E. (Maryland) - *Performance-Based Design*
- ❖ David Icove, Ph.D., P.E. (Tennessee) - *Forensic Fire Analysis*
- ❖ Marc Janssens, Ph.D., (Texas) - *Fire Assessment Methods*
- ❖ Francisco Joglar, Ph.D., P.E. (Virginia) - *Advanced Fire Risk Modeling*
- ❖ Susan Lamont, Ph.D., C.Eng. (UAE), *Structural Fire Protection*
- ❖ David Purser, Ph.D. (UK) – *Human Response to Fire*
- ❖ Richard Roby, Ph.D., P.E. (Maryland) – *Fire Dynamics*
- ❖ Eric Rosenbaum, P.E. (Maryland) - *Performance-Based Design*
- ❖ Jason Sutula, Ph.D., (Maryland) - *Advanced Fire Suppression*

# Doctoral Program

- ❖ PhD Option available through cooperation with other engineering departments
  - *Graduate 2 – 3 PhD's per year*
- ❖ Long-term goal: Initiate FPE PhD program
- ❖ Dissertations posted on-line

*Thank you for the invitation  
and scholarship support.*
