#### FCIA DIIM & Firestopping I & I & M – Webinar Installation, Inspection, Maintenance

#### **FCIA Webinar** 24 March 2015

#### Contacts

#### Firestop Contractors International Association Hillside, IL – +1-708-202-1108 - office Bill McHugh – bill @ fcia.org

#### Learning Objectives

Upon completing this program, the participant should know how to:

- 1. Recognize Perimeter Fire Containment, Penetration, Joint Product Design/Testing, Installation & Inspection & Management Standards & Code Requirements for Firestopping ... to become a 'System'.
- 2. Focus on Perimeter Fire Containment for Curtainwalls
- **3. Understand Requirements for Firestopping for Safety in the US and Canada**
- 4. Section 07 84 00++ Highlights
- 5. Learn about 'Why compartmentation and Firestopping''.

#### Outline

- FCIA A Trade Association
  - Total Fire Protection & Effective Compartmentation
  - Codes, Testing, Products Materials
  - Firestopping for Safety A Quality Protocol
    - DIIM

#### "DIIM"

- Firestopping for Safety DIIM
  - Properly *Designed* and Specified Firestopping FCIA 07-84-00 Specification
  - *Tested and Listed Systems* ASTM E 814 / UL 1479 - UL 2079, FM 4990, ULC-S-115, ASTM E2307
  - Professional *Installation* FCIA Member, FM 4991 Approved, UL/ULC Qualified Contractors
  - Properly *Inspected* ASTM E 2174 / 2393
     Protocol by IAS AC 291 Accreditation Criteria for Inspection Agencies
  - Maintained & Managed (Annually FCIA Members – NFPA 101, International Fire Code

#### Firestop Contractors International Association

- FCIA Worldwide Association
- Firestop Contractors, Manufacturers, Consultants, Reps, Distributors,
- Life Safety Digest
- FCIA Website Resources FREE

# Engineering Judgments/EFRRA

- Field or other Variances to Tested and Listed Systems?
  - Impractical
  - Annular Space / Gap too large / small
  - No System Exists
- Why???
  - Lack of Planning
  - Unique Conditions

Fire Stop Technologies, Inc.

# Engineering Judgments/EFRRA

- Variances to Systems at Site ? Now What...
  - First Action in Process
    - Find another system Same Manufacturer
    - Find another system Different Manufacturer
    - If no system exists in either case....
  - Second Action -
    - Engineering Judgment "EJ"
    - Equivalent Fire Resistance Rated Assembly "EFRRA"
  - Based on engineering, IFC Protocol

#### **International Firestop Council – Manufacturers – firestop.org**

#### IFC Guidelines for Evaluating Engineering Judgment Guidelines

'Construction industry professionals, building officials, fire officials, firestop contractors and other stakeholders need appropriate guidelines for evaluating and using such judgments.

As such, IFC developed *Recommended IFC Guidelines for Evaluating FireStop Systems in Engineering Judgments.* 

#### IFC EJ Guidelines - Engineering Judgments for firestop systems should:

1. Not be used in lieu of tested systems when available;

- 2. Be issued only by a firestop manufacturer's qualified technical personnel or in concert with the manufacturer by a knowledgeable registered Professional Engineer, Fire Protection Engineer, or an independent testing agency that provides listing services for firestop systems;
- 3. Be based upon interpolation of previously tested firestop systems that are either sufficiently similar in nature or clearly bracket the conditions upon which the judgment is to be given. Additional knowledge and technical interpretations based upon accepted engineering principles, fire science and fire testing guidelines (e.g. ASTM E 2032 Standard Guide for Extension of Data from Fire Endurance Tests, ULC Subject C263E Criteria for Use in Extension of Data from Fire Endurance Tests, or ASTM E2750 Standard Guide for Extensions of Data for Penetration Seals) may also be used as further support data;

### **IFC EJ Guidelines**

**Engineering Judgments for firestop systems should:** 

- 4. Be based upon full knowledge of the elements of the construction to be protected, the understanding of the probable behavior of that construction and the recommended firestop system protecting it were they to be subjected to the appropriate Firestop Standard Fire Test method for the rating indicated on the Engineering Judgment;
- 5. Be limited only to specific conditions and configurations upon which the engineering judgment was rendered and should be based upon reasonable performance expectations for the recommended firestop system under those conditions;
- 6. Be accepted only for a single, specific job and project location and should not be transferred to any other job or project location without thorough and appropriate review of all aspects of the next job or location's circumstances.

#### **IFC EJ Guidelines -** Basic Presentation Requirements Proper EJ's should:

- 1. Be presented in appropriately descriptive written form with or without detail drawings where appropriate;
- 2. Clearly indicate that the recommended firestop system is an EJ;
- 3. Include clear directions for the installation of the recommended firestop system;
- 4. Include dates of issue and authorization signature as well as the issuer's name, address and telephone number;
- 5. Reference tested system(s) upon which design (EJ) is based on;
- 6. Identify the job name, project location and firm EJ is issued to along with the non-standard conditions and rating supported by the EJ;

### **IFC EJ Presentation Guidelines – What's Seen?**

- 7. Have proper justification (i.e. UL, Intertek or other independent laboratory system(s) and or opinions);
- 8. Provide complete descriptions of critical elements for the firestop configuration. These should include, but not be limited to the following:
- a. Basic, Common
  - Type(s) of assembly used or being penetrated;
  - Rating supported by the EJ.
- **b.** Through Penetrations
  - Penetrating item(s) (type, size, etc.);
  - Annular space requirements, (minimum, maximum, actual, nominal, etc.)
  - Opening size;
  - Firestop product(s) to be used, type and amount (thickness if applicable);
  - Accessory items(s) (i.e. anchors, backing material, etc.)

c. Joints

- Joint Width (installed width, nominal)
- Movement Capability;
- Movement Class (thermal wind sway, seismic);
- Accessory item(s) (i.e. insulation type, thickness and compression, etc.)

### **IFC EJ Presentation Guidelines – What's Seen?**

d•Duct Enclosure Systems – SEE www.Firestop.org

- e• Firestop System annular space dimensions, floor/wall construction, design number, components, installed thickness.
- f. Perimeter Fire Barrier Systems
  - Type(s) of assembly used or being penetrated;
  - Hourly Rating required
  - Closest Listed System upon which the EJ is based
  - Joint Width
  - Static or Dynamic
  - Safing Insulation Types), thickness and compression, etc.
  - Five Basic Principles
  - 1. Mechanical Attachment of the Spandrel Insulation
  - 2. Protection of the Mullions
  - 3. Compression Fitting and Orientation of the Safing Insulation
  - 4. Installation of a Reinforcement Member(s), stiffener, at the safe-off area behind the spandrel insulation.
  - 5. Firestop Coating, type, thickness,

#### **IFC EJ Presentation Guidelines – What's Seen?**

f• Continuity Head-of-Wall Joints

- Joint Width, (installed width, nominal)
- Movement Capability
- Movement Class (thermal, wind sway, seismic)
- Accessory Item(s) (i.e. insulation type, thickness, compression, etc.)

IFC recommends that these guidelines be considered when evaluating whether any firestop system engineering judgment meets minimal requirements. Questions concerning the EJ request should be addressed to the initiator of the judgment.

- Insurance Classification?
  - Specialty Firestop Contractor?
  - Plumber, other trade??
- Workforce Educated as Firestop/Containment Workers
- Bonding Capability
- Project References & Experience
- Management System reviewed by....
  - FM 4991, UL or ULC ?

## **Firestop Contractor Qualifications**

## FM & UL/ULC – 4 Components

- 1. Office Facility Quality Management
  - System Audit
- 2. Field Jobsite Audit
- 3. Employ a person
  - UL/FM Firestop Exam @ 80% or better
  - DRI if employed by Approved/Qualified Firm,
    - Designated Responsible Individual (DRI)
- 4. Annual Audit

Qualified Firestop Contractor Program

## 1. Office Audit of Company Management System Manual

- Controlled Management Processes
- Project Successful Proven Contractor
- Education, Training, Accountability

### 1. FM, UL/ULC Company Audit of Management System (MS)

- Employee Training & Education
- Systems Selection
- Communicate systems to Field
- Material Controls
- Systems installation "protocol"
- Labeling
- Record keeping Variance Proce
- Non-Conformances
- Documentation
- Project closeout

CONFIGURATION A

## 2. Company MS Jobsite Audit by ULC, FM or UL

- Verification of firestop systems Processes
- Verify Management System Works
- Verify Company "communication"
   Office to field, field to office
- "Culture of Quality..."

Adler Photo

## 3. **DRI –** Company Appoints DRI if ....

- Pass Rigorous Firestop Examination
  - FCIA Firestop Manual of Practice
  - Firestop Systems Selection & Protocol
  - Management System Knowledge
- Keep CEU's 6 FM, 10 UL, ea. 3 yrs.
- Retested every 3 years (FM Only)
- One DRI per Approved Contractor Location

Qualified Firestop Contractor Program

## 4. Annual Audit FM 4991 UL / ULC Contractor Company Personnel

- Continued satisfactory performance
  - Quality Manual Implementation
- Documented Archived record keeping
- Employee Training Documentation
- Jobsite Visit
- DRI CEU Verification
- Find @www.fcia.org

## UL-ULC/FM 4991Contractor Company Benefits

#### **Quantified Differentiation ...**

- Focus on the Company & Individual
- Investment in Company Procedures
- Investment in People Education
- Investment in FCIA Manual of Practice
  - Project Successful Proven Contractor
  - Education, Training, Accountability
    - = Reduced Risk Life, Property, Business

Mr. Randy Perry Adler Firestopping Ltd. #23, 53016 Hwy 60 Acheson, AB T5T 1M9 Canada

Re: Qualified Firestop Applicator

As the firestop manufacturer with more UL and ULC Classified Firestop System Coverage than any other, we are intimately familiar with UL and ULC'S QFC Program. We recognize the program as one of two best-in-class, third-party, quality assurance methods available to building project decisionmakers to help ensure applicator quality. As such, we fully endorse the program and those applicators that have invested heavily to earn their way to become a member in this elite group of professionals.

It is our understanding that Adler Firestopping Ltd. is a ULC (Underwriters Laboratories of Canada) <u>Qualified Firestop Contractor (QFC)</u> in good standing. This can be verified at the bottom of the page at the following link:

http://www.ūl.com/global/eng/pages/offerings/industries/buildingmaterials/qualifiedcontractor program/gualified/firestop/

Moreover, Randy Perry has successfully attended our intensive, two-day FIT Level II program, taken the exam, earned a passing score and is within the two-year expiry period before renewal will be required. A copy of his certificate can be made available upon request.

Regards. 的人。例如如

John Hurley Regional Manager, Western US and Canada

Certificate Number: 1016

#### QUALIFIED FIRESTOP CONTRACTOR CERTIFICATE

 Company Name: Adler Firestopping Ltd.
 File number: NC10757
 Issued: 2/1/2010

 Address: Edmonton Office, #23, 53016 Hwy 60, Acheaon, AB, T7X 5A7 CANADA
 Expires: 2/1/2011

 Telephone #: (780)-962-9495
 Fax #: (780)-962-9794
 Email Address: randy@adlerfirestopping.com

This company has demonstrated that it complies with UL's Qualified Firestop Contractor Program Requirements for Canada. Under this programme, the Contractor has demonstrated knowledge of selection and installation of firestop systems as evidenced by the successful performance in a written examination by a "Designated Responsible Individual" (DRI). The Contractor has also established a Management System specifically focused on the proper selection and installation of "ULC Listed Firestop Systems.

This certificate is not transferable and expires one (1) year after the issue date. This certificate may be displayed, copied and shared with others but must be used in its entirety. Only those companies listed in ULC's Online Certifications Directory for the Qualified Firestop Contractor Program at www.ulc.ca/contractor are considered eligible for this program and to use this Certificate and the ULC marking (shown here) in its advertising and promotional material in accordance with the marking guidelines provided with this Certificate.

Underwriters Laboratories of Canada@ reserves the right to void this certificate at any point. This certificate does not indicate compliance with any ULC Product Certification Program. For additional information regarding the Qualified Firestop Contractor Program, please visit www.ulc.ca/contractor.

#### I – Inspection – Code Requirements SECTION 104 – DUTIES AND POWERS OF BUILDING OFFICIAL

[A] 104.1 General. The *building official* is hereby authorized and directed to enforce the provisions of this code. The *building official* shall have the authority to render interpretations of this code and to adopt policies and procedures in order to clarify the application of its provisions. Such interpretations, policies and procedures shall be in compliance with the intent and purpose of this code. Such policies and procedures shall not have the effect of waiving requirements specifically provided for in this code.

[A] 104.4 Inspections. The *building official* shall make all of the required inspections, or the *building official* shall have the authority to accept reports of inspection by *approved agencies* or individuals. Reports of such inspections shall be in writing and be certified by a responsible officer of such *approved agency* or by the responsible individual. The *building official* is authorized to engage such expert opinion as deemed necessary to report upon unusual technical issues that arise, subject to the approval of the appointing authority.

[A] **110.3 Required inspections.** The *building official*, upon notification, shall make the inspections set forth in Sections 110.3.1 through 110.3.10.

[A] **110.3.6 Fire- and smoke-resistant penetrations.** Protection of joints and penetrations in fire-resistance rated assemblies, *smoke barriers* and smoke partitions shall not be concealed from view until inspected and *approved*.

[A] **110.4 Inspection agencies.** The *building official* is authorized to accept reports of *approved* inspection agencies, provided such agencies satisfy the requirements as to qualifications and reliability. [IBC 110.4]

[A] **110.6 Approval required.** Work shall not be done beyond the point indicated in each successive inspection without first obtaining the approval of the *building official*....More. [IBC 110.6]

[A] APPROVED AGENCY. An established and recognized agency regularly engaged in conducting tests or furnishing inspection services, when such agency has been *approved*. [IBC 202. Definitions]

[A] **APPROVED.** Acceptable to the *building official* or authority having jurisdiction.

[IBC 202 Definitions]

**SPECIAL INSPECTOR.** A qualified person employed or retained by an *approved* agency and *approved* by the *building official* as having the competence necessary to inspect a particular type of construction requiring *special inspection*. [IBC 202. Definitions]

# **SECTION 1703 APPROVALS 1703.1 Approved agency.** An *approved agency* shall provide all information as necessary for the *building official* to determine that the agency meets the applicable requirements.
**1703.1.1 Independence.** An approved agency shall be objective, competent and independent from the contractor responsible for the work being inspected. The agency shall also disclose possible conflicts of interest so that objectivity can be confirmed. **[IBC 1703.1.2]** 

1703.1.2 Equipment. An approved agency shall have adequate equipment to perform required tests. The equipment shall be periodically calibrated. [IBC 1703.1.2]

1703.1.3 Personnel. An approved agency shall employ experienced personnel educated in conducting, supervising and evaluating tests and/or inspections.[IBC 1703.1.3]

**1704.2 Special inspections.** Where application is made for construction as described in this section, **the owner or the registered design professional in responsible charge acting as the owner's agent** shall employ one or more approved agencies to perform inspections during construction on the types of work listed under Section 1705. **These inspections are in addition to the inspections identified in Section 110. [IBC 1704.2]** 

**1704.2.1 Special inspector qualifications.** The special inspector shall provide written documentation to the building official demonstrating his or her competence and relevant experience or training. Experience or training shall be considered relevant when the documented experience or training is related in complexity to the same type of special inspection activities for projects of similar complexity and material qualities. These qualifications are in addition to qualifications specified in other sections of this code.

The registered design professional in responsible charge and engineers of record involved in the design of the project are permitted to act as the approved agency and their personnel are permitted to act as the special inspector for the work designed by them, provided they qualify as special inspectors.

**1705.16 Fire-resistant penetrations and joints.** In highrise buildings or in buildings assigned to Risk Category III or IV in accordance with Section 1604.5, special inspections for through-penetrations, membrane penetration firestops, fire resistant joint systems, and perimeter fire barrier systems that are tested and listed in accordance with Sections 714.3.1.2, 714.4.1.2, 715.3 and 715.4 shall be in accordance with Section 1705.16.1 or 1705.16.2.

• **1705.1.1 Special cases.** Special inspections shall be required for proposed work that is, in the opinion of the building official, unusual in its nature, such as, but not limited to, the following **examples:** 

- Examples:
  - Construction materials and systems that are alternatives to materials and systems prescribed by this code. [EJ's]
  - Unusual design applications of materials described in this code. [EJ's]
  - Materials and systems required to be installed in accordance with additional manufacturer's instructions that prescribe requirements not contained in this code or in standards referenced by this code.

I – Inspection – Code Requirements HIGH-RISE BUILDING. A building with an occupied floor located more than 75 feet (22 860 mm) above the lowest level of fire department vehicle access. [IBC 202]

**1705.16.1 Penetration firestops.** Inspections of penetration firestop systems that are tested and listed in accordance with Sections 714.3.1.2 and 714.4.1.2 shall be conducted by an approved inspection agency in accordance with ASTM E 2174.

**1705.16.2 Fire-resistant joint systems.** Inspection of fire resistant joint systems that are tested and listed in accordance with Sections 715.3 and 715.4 shall be conducted by an approved inspection agency in accordance with ASTM E 2393.

# Inspection Forms ASTM E 2174 - ASTM E 2393

- One for each type of firestop
- Submit 1 day after Inspection to Authorizing Agency
- Numbered Controlled
- Required During/Post Construction Methods

#### Inspection Reports - IBC

**1704.2.4 Report requirement.** Special inspectors shall keep records of inspections. The special inspector shall furnish inspection reports to the building official, and to the registered design professional in responsible charge. Reports shall indicate that work inspected was or was not completed in conformance to approved construction documents. **Discrepancies shall be brought to the immediate** attention of the contractor for correction. If they are not **corrected**, the discrepancies shall be brought to the attention of the building official and to the registered design professional in responsible charge **prior to the completion** of that phase of the work. A final report documenting required special inspections and correction of any discrepancies noted in the inspections shall be submitted at a point in time agreed upon prior to the start of work by the applicant and the building official.

# Inspection Final Report ASTM E 2174 - ASTM E 2393

4.5.8.1 Whenever or wherever any device, equipment, system, condition, arrangement, level of protection, fire-resistive construction, or any other feature is required for compliance with the provisions of this Code, such device, equipment, system, condition, arrangement, level of protection, fire-resistive construction, or other feature shall thereafter be continuously maintained in accordance with applicable NFPA requirements or requirements developed as part of a performance-based design, or as directed by the AHJ. [101:4.6.12.1]

# **National Fire Protection**

## **Association - NFPA 101-2012**

- 4.5.8.2 No existing life safety feature <u>shall be removed or</u> <u>reduced</u> where such feature is a requirement for new construction. [101:4.6.12.2]
- 4.5.8.3\* Existing life safety features obvious to the public, if not required by the Code, <u>shall be either maintained or removed</u>. [101:4.6.12.3]
- 4.5.8.4 Any device, equipment, system, condition, arrangement, level of protection, fire-resistive construction, or any other feature requiring periodic testing, inspection, or operation to ensure its maintenance <u>shall be tested, inspected, or operated</u> as specified elsewhere in this Code or as directed by the AHJ. [101:4.6.12.4]
- 4.5.8.5 Maintenance, inspection, and testing <u>shall be performed</u> <u>under the supervision of a responsible person who shall</u> <u>ensure</u> that testing, inspection, and maintenance <u>are made at</u> <u>specified intervals</u> in accordance with applicable NFPA standards or as directed by the AHJ. [101:4.6.12.5]
# International Fire Code Maintenance

#### **SECTION 703** FIRE-RESISTANCE-RATED CONSTRUCTION

**703.1** Maintenance. The required fire resistance rating of fireresistance rated construction (including walls, fire stops, shaft enclosures, partitions, smoke barriers, floors, fire resistive coatings and sprayed fire resistant materials applied to structural members and fire resistive joint systems) <u>shall be maintained</u>. Such elements shall be <u>visually inspected by the owner annually</u> and properly repaired, restored or replaced when damaged, altered, breached or penetrated.

**Openings** made therein for the passage of pipes, electrical conduit, wires, ducts, air transfer openings, and holes made for any reason *shall be protected with approved methods* capable of resisting the passage of smoke and fire.

#### UAE Fire and Life Safety Code of Practice Maintenance & Management

Chapter 1, SECTION 21 Firestopping

<u>21.15.2</u> The required fire resistance rating of installed firestop systems shall be visually inspected by the owner or owner's inspection agency annually. Damaged, altered or breached firestop systems shall be properly repaired, restored or replaced to comply with applicable codes as per the guidelines of Civil defense.

<u>21.15.3</u> Any new **Openings** made therein for the passage of through penetrants, shall be protected with approved firestop system to comply with applicable codes as per the guidelines of Civil defense.

### National Fire Code of Canada

**National Fire Code of Canada** 

- Division B Part 2, Building and Occupant Fire Safety
   2.2.1.2 Damage to Fire Separations where fire separations are damaged so as to affect their integrity, they shall be repaired so that the integrity of the fire separation is maintained...
- City of Calgary Best Practices (1997)
- FCIA Manual of Practice Appendix, Maintenance FCIA recommends Barrier Management for Effective Compartmentation and Structural Protection
- Best Practice Guide NRC

Includes Fire Dampers, Fire Doors...and Continuity

### "TOTAL FIRE PROTECTION"

- Effective Compartmentation
  - Fire Barriers, Fire Walls/Floors, Smoke Barriers
  - Firestopping, Fire Dampers, Swinging and Rolling Fire Doors, Fire Rated Glazing
- Detection & Alarm Systems
- Sprinkler Suppression Systems
- Education & Egress-

### FCIA DIIM & Firestopping

Proper 'DCIIM' Means Reliable Systems...

- **Properly** *Designed* A/E Consultant
  - Tested and Listed Systems, FCIA Member Mfr's., Compartments per IBC, NFPA Codes, SUBMITTALS....Specified (CCS,CDT, RSW)
- Properly *Coordinated & Installed* 
  - FCIA Member, FM 4991, or UL Qualified Contractors
- Properly *Inspected* 
  - ASTM E 2174 & ASTM E 2393, by IAS Qualified Inspectors at IAS AC 291 Accredited Inspection Firms
- Properly *Maintained & Managed*
  - FCIA Member, FM 4991, or UL Qualified, IAS Accredited Firms
