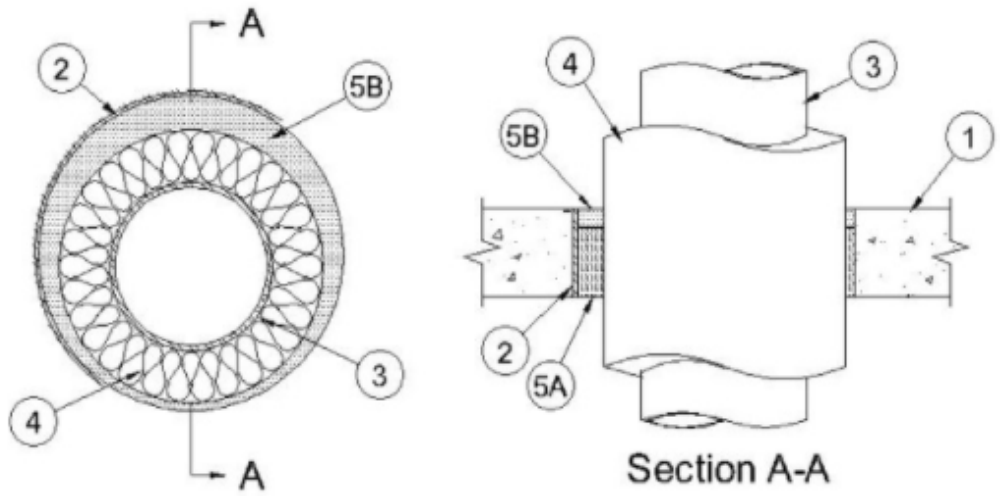
F Ratings — 1 and 2 Hr (See Item 3)

T Ratings — 0, 3/4 and 1 Hr (See Item 4)



1. **Floor or Wall Assembly** — Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m^3) concrete floors or min 3 in. (76 mm) thick reinforced lightweight or normal weight concrete walls. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max diam of opening 9 in. (229 mm).

   See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Steel Sleeve** — (Optional) - Nom 9 in. (229 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly. Steel sleeve may be installed flush or may project max 2 in. (51mm) beyond the floor or wall surfaces. As an alternate, nom 9 in. (229 mm) diam (or smaller) sleeve fabricated from nom 0.019 in. (0.48 mm) thick galv steel cast or grouted into floor or wall assembly flush with floor or wall surfaces.

3. **Through Penetrants** — One metallic pipe to be installed concentrically or eccentrically within opening. Penetrant to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of metallic pipes may be used:

   A. **Steel Pipe** — Nom 4 in. (102 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.

   B. **Iron Pipe** — Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.

   C. **Copper Tubing** — Nom 2 in. (51 mm) diam (or smaller) Type L (or heavier) copper tubing.

   D. **Copper Pipe** — Nom 2 in. (51 mm) diam (or smaller) Regular (or heavier) copper pipe.

F Rating is 2 Hr for Penetrants A and B. F Rating is 1 Hr for Penetrants C and D.

4. **Pipe Covering*** — Nom 1-1/2 in. (38 mm) thick (or less) hollow cylindrical heavy density glass fiber units jacketed on the outside with an all service jacket. Longitudinal joints sealed with metal fasteners or factory-applied self-sealing lap tape. Transverse joints secured with metal fasteners or with butt tape supplied with product. Annular space between the pipe covering and periphery of opening or sleeve shall be min 1/2 in. to max 1 in. (13 mm to 25 mm).

   See **Pipe and Equipment Covering - Materials** - (BRGU) category in the Building Materials Directory for names of manufacturers. Any pipe covering material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a smoke Developed Index of 50 or less may be used.

T Rating is 3/4 Hr for nom 1-1/2 in. (38 mm) thick pipe covering for penetrants A and B. T Rating is 1 Hr for nom 1-1/2 in. (38 mm) thick pipe covering for Penetrants C and D. T Rating is 0 Hr for all Penetrants when pipe coverings less than nom 1-1/2 in. (38 mm) thick.

Qualified Firestop Contractor Program

Master Audit

Certificate of Compliance

Certificate Number: 1000-0001

Audit Date: 08/03/2018

Expiration Date: 12/31/2019

This certificate reports the findings of an audit by UL to the management system requirements of the Qualified Firestop Contractor Program. The audit was conducted to the requirements specified in the Qualified Firestop Contractor Program requirements. The UL qualified contractor was found to be in compliance with the requirements at the time of the site audit.

Structure Name: Underwriters Laboratories
Job Number: 0001
Address: 333 Pfingsten Rd.
Northbrook, IL 60062

Qualified Contractor: FCIA
Address: 4415 W. Harrison Street, Suite 540
Hillside, IL 60162

Qualified Contractor Scope of Work:

For Project # 0001 Firestopping Head and Bottom of Interior Fire Walls and all Trade Penetrations / Except Cable Tray

National Fire Code of Canada

Division A, Compliance, Objectives and Functional Statements

A-1.1.1.1.(1) Application of this Code.

- Buildings and facilities, whether occupied or vacant.
- Some NBC requirements apply to new buildings and retroactive application to existing situations as prescribed by this Code could result in some difficulty in achieving compliance.
- It is the intent of the NFC that an ***equivalent level of safety be achieved*** rather than necessarily achieving strict conformance to the NBC. (AHJ Approval)
- **Owner or the owner's authorized agent is responsible for carrying out provisions of the Code**

(see Article 2.2.1.1. of Division C).

National Fire Code of Canada

Division A, Compliance, Objectives and Functional Statements

- A-1.2.1.1.(1)(b) Code Compliance via Alternative Solutions. Where a design differs from the acceptable solutions in Division B, then it should be treated as an “alternative solution.”
- A proponent of an alternative solution must demonstrate that the alternative solution **addresses the same issues as the applicable acceptable solutions** in Division B and their attributed objectives and functional statements.

National Fire Code of Canada

Division A, Compliance, Objectives and Functional Statements

2.2.1. Objectives -- 2.2.1.1. Objectives

1) The objectives of this Code are as follows (see Note A-2.2.1.1.(1)):
OS Safety

An objective of this Code is to **limit the probability** that, as a result of specific circumstances related to the *building* or facility, **a person in or adjacent to the *building* or facility will be exposed to an unacceptable risk of injury.**

National Fire Code of Canada

Division A, Compliance, Objectives and Functional Statements

OS1 Fire Safety

An objective of this Code is to limit the probability that, as a result of

(a) activities related to the construction, use or demolition of the *building* or facility,

(b) the condition of specific elements of the *building* or facility,

(c) the design or construction of specific elements of the facility related to certain hazards, or

(d) inadequate built-in protection measures for the current or intended use of the *building*, a person in or adjacent to the *building* or facility will be exposed to an unacceptable risk of injury due to fire. The risks of injury due to fire addressed in this Code are those caused by—

National Fire Code of Canada

Division A, Compliance, Objectives and Functional Statements

- OS1.1 – **fire or explosion** occurring
- OS1.2 – fire or explosion **impacting areas beyond its point of origin**
- OS1.3 – **collapse of physical elements** due to a fire or explosion
- OS1.4 – **fire safety systems** failing to function as expected
- OS1.5 – persons being delayed in or impeded from moving to a safe place during a fire emergency

National Fire Code of Canada

Division A, Compliance, Objectives and Functional Statements

- **OP Fire Protection of Buildings and Facilities**
- An objective of this Code is **to limit the probability that**, as a result of specific circumstances related to the *building* or facility, the ***building*** **or facility will be exposed to an unacceptable risk of damage due to fire**.

National Fire Code of Canada

Division A, Compliance, Objectives and Functional Statements

- **OP1 Fire Protection of the Building or Facility**
- An objective of this Code is to **limit the probability that, as a result of**

  (a) activities related to the construction, use or demolition of the *building* or facility,

  (b) the condition of specific elements of the *building* or facility,

  (c) the design or construction of specific elements of the facility related to certain hazards, or

  (d) **inadequate built-in protection measures for the current or intended use of the *building*,** the *building* or facility will be exposed to **an unacceptable risk of damage** due to fire. The risks of damage due to fire addressed in this Code are those caused by—

National Fire Code of Canada

Division A, Compliance, Objectives and Functional Statements

- **OP1 Fire Protection of the Building or Facility**

  OP1.1 – fire or explosion occurring

  OP1.2 – **fire or explosion impacting** areas **beyond its point of origin**

  OP1.3 – **collapse of physical elements** due to a fire or explosion

  OP1.4 – **fire safety systems failing** to function as expected

  Fire Safety Systems NOT DEFINED.

National Fire Code of Canada

Division A, Compliance, Objectives and Functional Statements

3.2.1.1. Functional Statements

1) The objectives of this Code are achieved by measures, such as those described in the acceptable solutions in Division B, that are intended to allow the *building* or facility or its elements to perform the following functions (see Note A-3.2.1.1.(1)):

F01 To minimize the risk of accidental ignition.
F02 To **limit the severity and effects of fire** or explosions.
F03 To **retard the effects of fire on areas beyond its point of origin**.
F04 To **retard failure or collapse** due to the effects of fire.
F05 To retard the effects of fire on emergency egress facilities.
F06 To retard the effects of fire on facilities for notification, suppression and emergency response.

National Fire Code of Canada

Division A, Compliance, Objectives and Functional Statements

- 3.2.1.1. Functional Statements

1) The objectives of this Code are achieved by measures, such as those described in the acceptable solutions in Division B, that are intended to allow the *building* or facility or its elements to perform the following functions (see Note A-3.2.1.1.(1)):

F10 To **facilitate the timely movement of persons to a safe place** in an emergency.

F11 To notify persons, in a timely manner, of the need to take action in an emergency.

F12 To facilitate emergency response.

F13 To notify emergency responders, in a timely manner, of the need to take action in an emergency.

F20 To **support and withstand expected loads and forces.**

F21 To limit or accommodate dimensional change.

F22 To limit movement under expected loads and forces.

National Fire Code of Canada

Division A, Compliance, Objectives and Functional Statements

- **F31** To minimize the risk of injury to persons as a result of **contact with hot surfaces** or substances.
- **F34** To **resist or discourage unwanted access or entry.**
- **F40** To **limit the level of contaminants**.
- **F44 To limit the spread of hazardous substances beyond their point of release**.
- **F80 To resist deterioration resulting from expected service conditions**.
- **F82 To minimize the risk of inadequate performance due to improper maintenance or lack of maintenance.**

National Fire Code of Canada

National Fire Code of Canada

Division B, Part 2 - Building and Occupant Fire Safety

Section 2.2. Fire Separations - 2.2.1. General - 2.2.1.1. Fire Separations

1) Where a *building* contains more than one *major occupancy*, such *occupancies* shall be separated from each other in conformance with the NBC.

2) Where rooms or spaces within a *building* contain a *high-hazard industrial occupancy*, such *occupancy* shall be separated from the remainder of the *building* by *fire separations* in conformance with this Code and the NBC.

3) Rooms, corridors, shafts and other spaces shall be separated where practicable by *fire separations* conforming to the NBC.

National Fire Code of Canada

Division B, Part 2 - Building and Occupant Fire Safety

2.2.1.2. Damage to Fire Separations

1) Where *fire separations* are damaged so as to affect their integrity, they shall be repaired so that the integrity of the *fire separation* is maintained.

National Fire Code of Canada

Division B, Part 2 - Building and Occupant Fire Safety

2.2.2.4. Inspection and Maintenance

1) Defects that interfere with the operation of closures in fire separations shall be corrected, and such closures shall be maintained to ensure that they are operable at all times by

a) keeping fusible links and other heat-actuated devices undamaged and free of paint and dirt,

b) keeping guides, bearings and stay rolls clean and lubricated,

c) making necessary adjustments and repairs to door hardware and accessories to ensure proper closing and latching, and

d) repairing or replacing inoperative parts of hold-open devices and automatic releasing devices.

National Fire Code of Canada

Division B, Part 2 - Building and Occupant Fire Safety

3) Doors in fire separations shall be operated at intervals not greater than one month to ensure that they are properly maintained in accordance with Sentence (1), ….

…. as specified in the fire safety plan prepared in conformance with Section 2.8.

4) Closures in fire separations shall not be obstructed, blocked, wedged open, or altered in any way that would prevent the intended operation of the closure.

National Fire Code of Canada

Division B, Part 2 - Building and Occupant Fire Safety

5) Fire dampers, smoke dampers, combination smoke/fire dampers and fire stop flaps shall be….

a) inspected at intervals not greater than 12 months to ensure that they are in place and not obviously damaged or obstructed, and

b) tested in accordance with NFPA 80, “Fire Doors and Other Opening Protectives.”

National Fire Code of Canada

Division B, Part 2 - Building and Occupant Fire Safety
Section 2.8. Emergency Planning - 2.8.1. General - 2.8.1.1. Application

1) Fire emergency procedures conforming to this Section shall be provided for

a) every building containing an assembly, care, treatment or detention occupancy,

b) every building required by the NBC to have a fire alarm system,

c) demolition and construction sites regulated under Section 5.6.,

d) storage areas required to have a fire safety plan in conformance with Articles 3.2.2.5. and 3.3.2.9.,

e) areas where flammable liquids or combustible liquids are stored or handled, in conformance with Article 4.1.5.5., and

f) areas where hazardous processes or operations occur, in conformance with Article 5.1.5.1.

National Fire Code of Canada

Division B, Part 2 - Building and Occupant Fire Safety

2.8.2.1. Measures in a Fire Safety Plan

1) In buildings or areas described in Article 2.8.1.1., a fire safety plan conforming to this Section shall be prepared in cooperation with the fire department and other applicable regulatory authorities and shall include

a) the emergency procedures to be used in case of fire, including

i) sounding the fire alarm (see Note A-2.8.2.1.(1)(a)(i)),

ii) notifying the fire department,

iii) instructing occupants on procedures to be followed when the fire alarm sounds,

iv) evacuating occupants, including special provisions for persons requiring assistance (see Note A-2.8.2.1.(1)(a)(iv)),

v) confining, controlling and extinguishing the fire,

National Fire Code of Canada

Division B, Part 2 - Building and Occupant Fire Safety

2.8.2.1. & 2.8.2.2. Measures in a Fire Safety Plan

b) the appointment and organization of designated supervisory staff to carry out fire safety duties,

c) the training of supervisory staff and other occupants in their responsibilities for fire safety,

d) documents, including diagrams, showing the type, location and operation of the building fire emergency systems,

e) the holding of fire drills,

f) the control of fire hazards in the building, and

g) the inspection and maintenance of building facilities provided for the safety

of occupants. (See Note A-2.8.2.1.(1).)

2) The fire safety plan shall be reviewed at intervals not greater than 12 months to ensure that it takes account of changes in the use and other characteristics of the building.

National Fire Code of Canada

Notes to Division B, Part 2 - Building and Occupant Fire Safety

A-2.1.3.1.(1) The National Building Code of Canada is most often applied to existing buildings **when an owner wishes to rehabilitate a building, change its use, or build an addition; or when an enforcement authority decrees that a building, or a class of buildings, be altered for reasons of public safety**. ***It is not intended that either the NBC or the NFC be used to enforce the retrospective application of new requirements in the NBC*** to existing buildings. Although the NFC could be interpreted to require the installation of fire alarm, standpipe and hose and automatic sprinkler systems in an existing building for which there were no requirements before the National Building Code of Canada 2005 was issued, it is the intent of the Canadian Commission on Building and Fire Codes that the NFC not be applied in this manner to these buildings.

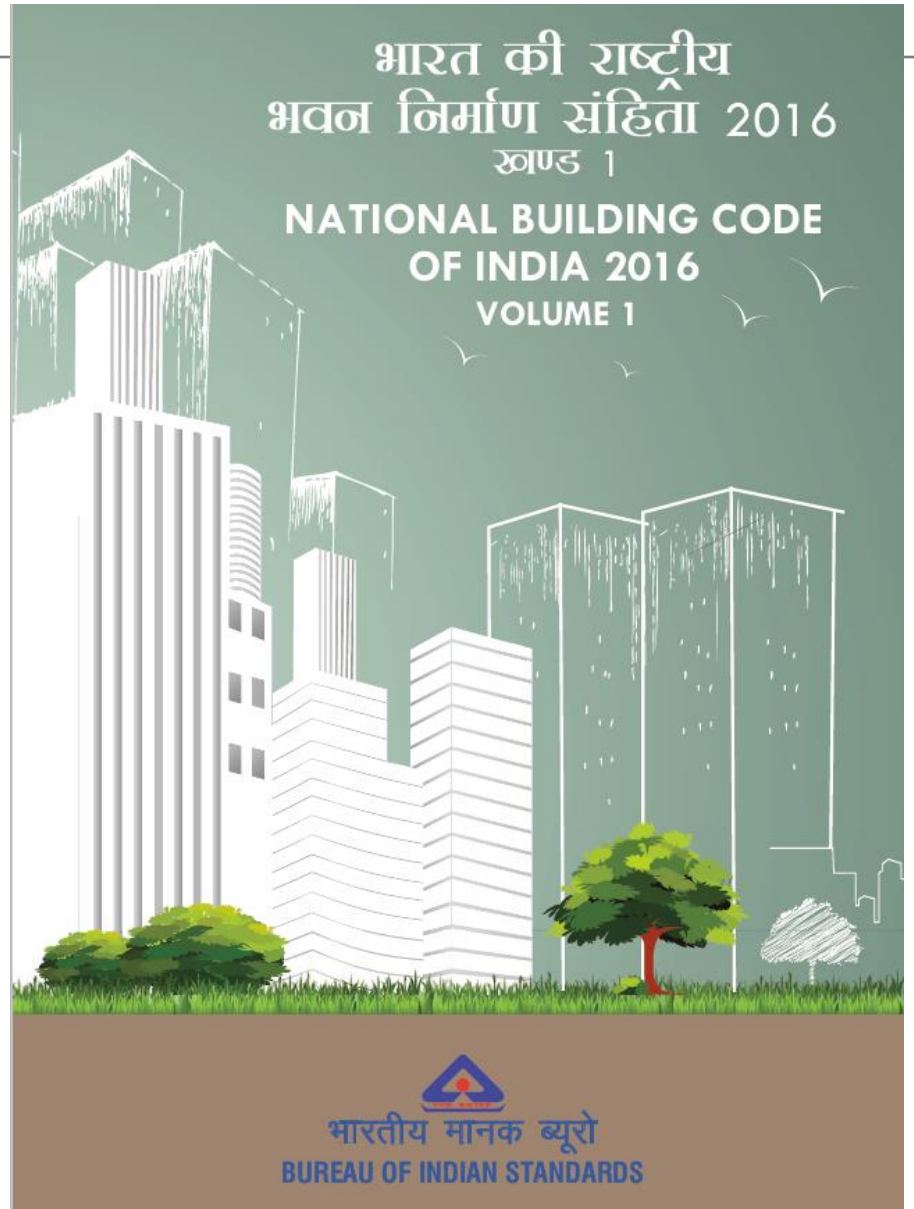
Existing Buildings – NBC India

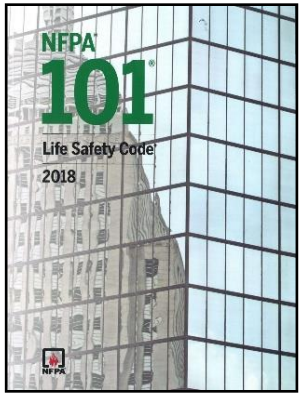


Fire Codes Require Maintenance

- 9 BUILDING MAINTENANCE – METHODS AND MANAGEMENT
- 9.1 General – “Any building (including its services) when built has certain objectives and during its total economic life, it has to be maintained in proper condition to meet those objectives. **Maintenance is a continuous process requiring a close watch and taking immediate remedial action.** It is interwoven with good quality of housekeeping. It is largely governed by the quality of original construction. **The owners, engineers, constructors, occupants and the maintenance agency are all deeply involved in this process and share a responsibility….”.**

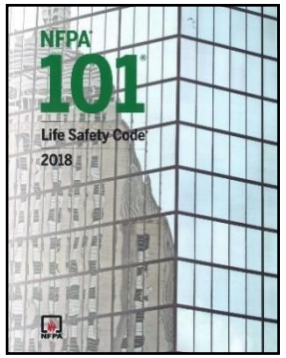
Fire Codes Require Maintenance

- National Fire Code of Canada
  - Maintain Protection, PERIOD…
- NFPA 101
  - No Frequency
- NFPA 1
  - Inspection 3 Years High Rise
- International Fire Code
  - Annual Visual Inspection



National Fire Protection Association
NFPA 101 – 2018

- **SECTION 4.6.12 Maintenance, Inspection, and Testing.**
  - **4.6.12.1** **Whenever or wherever any device**, equipment, system, condition, arrangement, level of protection, fire-resistive construction, or any other feature **is required for compliance** with the provisions of this Code, **such device**, equipment, system, condition, arrangement, level of protection, fire-resistive construction, or other feature ***shall thereafter be continuously maintained*** … in accordance with applicable NFPA requirements or requirements developed as part of a performance-based design, or as directed by the AHJ.



National Fire Protection Association
NFPA 1 – 2018

- **12.3.3* Maintenance of Fire-Resistive Construction, Draft-Stop Partitions, and Roof Coverings.**
  - **12.3.3.1** Required fire-resistive construction, including fire barriers, fire walls, exterior walls due to location on property, fire-resistive requirements based on type of construction, draftstop partitions, and roof coverings, *shall be maintained and shall be properly repaired, restored, or replaced where damaged, altered, breached, penetrated, removed, or improperly installed.*

FCIA Added Emphasis

National Fire Protection Association
NFPA 1 – 2018

- **12.3.3.3.1** The **person responsible** for conducting the visual inspection shall demonstrate appropriate **technical knowledge and experience in fire-resistance-rated design and construction** acceptable to the AHJ.
- **12.3.3.3.2** A written report prepared by the person responsible for conducting the visual inspection shall be submitted to the AHJ documenting the results of the visual inspection.

FCIA Added Emphasis

2018 International Fire Code Maintenance

SECTION 701
GENERAL

- **701.1 Scope.** The provisions of this chapter shall govern the inspection and maintenance of the materials, systems and assemblies used for **structural *fire-resistance***, *fire-resistance-rated* construction separation of adjacent spaces and construction installed to resist the passage of smoke to safeguard against the spread of fire and smoke within a building and the spread of fire to or from buildings. New buildings shall comply with the *IBC*.

FCIA Added Emphasis

2018 International Fire Code Maintenance

SECTION 701
GENERAL

- **701.2 Fire-resistance-rated construction.** The *fire-resistance rating* of the following *fire-resistance-rated* construction shall be maintained:
  1. Structural members
  2. *Exterior walls*
  3. *Fire walls, fire barriers, fire partitions*
  4. *Horizontal assemblies*
  5. Shaft enclosures

2018 International Fire Code Maintenance

SECTION 701
GENERAL

- **701.5 Maintaining protection.** Materials, systems and devices used to repair or protect breaches and openings in fire-resistance-rated construction and construction installed to resist the passage of smoke shall be maintained in accordance with Sections 703 through 707.

FCIA Added Emphasis

2018 International Fire Code Maintenance

SECTION 701
GENERAL

- **701.6 Owner's responsibility.** The owner shall maintain an inventory of all required fire-resistance-rated construction, construction installed to resist the passage of smoke and the construction included in Sections 703 through 707. **Such construction shall be visually inspected by the *owner* annually and properly repaired, restored or replaced where damaged, altered, breached or penetrated.**

- **FCIA Initiative with Koffel Assoc. – 'Inventory'…**

FCIA Added Emphasis

2018 International Fire Code Maintenance

SECTION 701
GENERAL

- **701.6 Owner's responsibility Cont. Records of inspections and repairs shall be maintained.** Where concealed, such elements shall not be required to be visually inspected by the *owner* unless the concealed space is accessible by the removal or movement of a panel, access door, ceiling tile or similar movable entry to the space.

FCIA Added Emphasis

2018 International Fire Code Maintenance

SECTION 703
PENETRATIONS

- **703.1 Maintaining protection.** Materials and firestop systems used to protect membrane and through penetrations in *fire-resistance-rated* construction and construction installed to resist the passage of smoke shall be maintained.

FCIA Added Emphasis

2018 International Fire Code Maintenance

SECTION 703
PENETRATIONS

- **703.1 Maintaining protection cont.** The materials and firestop systems shall be **securely attached** **to or bonded to the construction being penetrated** **with no openings visible** through or into the cavity of the construction. Where the system design number is known, the system shall be inspected to the listing criteria and manufacturer's installation instructions.

- **FCIA Initiative…"Where the system design number is known"…**

FCIA Added Emphasis

2018 International Fire Code Maintenance

SECTION 704
JOINTS AND VOIDS

- **704.1 Maintaining protection.** Where required when the building was originally constructed, materials and systems used to protect joints and voids in the following locations shall be maintained. The materials and systems shall be securely attached to or bonded to the adjacent construction, without openings visible through the construction.

FCIA Added Emphasis
