FCIA DIIM &
07-84-00 Firestopping

2015 CSC
Annual Conference
Contacts

Firestop Contractors International Association
Hillside, IL USA – 708-202-1108 - office
Bill McHugh – bill @ fcia.org

Presentation @ www.FCIA.org , Hot News
Learning Objectives

Upon completing this program, the participant should know how to:

1. Identify Design/Testing, Installation & Inspection & Management Standards & Code Requirements for Firestopping ... to become a ‘System’. This includes Perimeter Fire Containment, Penetration, Joint Systems’.
2. Section 07 84 00 Highlights
3. Understand Requirements for Firestopping for Safety in Canada and the US
FCIA – A Trade Association

• Total Fire Protection & Effective Compartmentation
• Codes, Testing, Products - Materials
• Firestopping for Safety – A Quality Protocol - DIIM
“DIIM”

• Firestopping for Safety – DIIM
  • Properly **Designed** and Specified Firestopping
    FCIA - 07-84-00 – Specification – RSW, CCS
  • **Tested and Listed Systems** - ASTM E 814 / UL 1479/2079, FM 4990, ULC-S-115, ASTM E2307
  • Professional **Installation** – FCIA Member, FM 4991 Approved, ULC Qualified Contractors
  • Properly **Inspected** – to….ASTM E 2174 / 2393 Protocol by IAS AC 291 Accredited Inspection Agencies

Code Requirements

National Building Code of Canada (NBC)

The Canadian Commission on Building and Fire Codes (CCBFC):

– Volunteers appointed by NRC
– Regulators, construction industry & public interest
– 2009 Cycle Finished…published November 2010
– 2015 Cycle Starting…

Oversees the code development system
Code Requirements

- **National Building Code of Canada**
  - NBCC
    - Adopt Entirety
  - NBCC
    - Adopt With Amendments
    - Publish Provincial Code based on National Code
  - NBCC 2010…2015?
Compartmentation Codes – NBC

- *Fire separation* means a construction assembly that acts as a barrier against the spread of fire.
  - Division A:1.4.1.2, NBCC 2005
    - Appendix A,
      » A *fire separation* may or may not have a fire-resistance rating.
Compartmentation Codes – NBC

- **Division A, 1.4.1.2**
- *Fire resistance rating means* the time in minutes or hours that a material or assemblies of materials will withstand the passage of flame and the transmission of heat when exposed to fire under specified conditions of test and performance criteria, or as determined by extension or interpretation of information derived therefrom as prescribed in this Code.

Compartmentation Codes – NBC

Compartmentation Codes
NBCC  - 3.1.8.1.(1)(b)

Although a fire separation is not always required to have a fire-resistance rating, the fire separation should act as a barrier to the spread of smoke and fire until some response is initiated.

NEW 2010: When choosing products for fire stopping, the physical characteristics of the material used at the joints as well as the nature of the assembly and its potential movement should be taken into consideration.

If the fire-resistance rating of a fire separation is waived on the basis of the presence of an automatic sprinkler system, it is intended that the fire separation will be constructed so that it will remain in place and act as a barrier against the spread of smoke for a period of time until the sprinklers have actuated and controlled the fire.

• CAN/UL-S115 Listed Systems – NOTE: L-Rating.
Compartmentation Codes – NBC

• 3.1.8.1 – Barrier to control Smoke Spread

Although a fire separation is not always required to have a fire resistance rating, the fire separation should act as a barrier to the spread of smoke and fire until some response is initiated. If the fire resistance rating of a fire separation is waived on the basis of the presence of an automatic sprinkler system, it is intended that the fire separation will be constructed so that it will remain in place and act as a barrier against the spread of smoke for a period of time until the sprinklers have actuated and controlled the fire."

CAN/UL-S115 - “L” Rating
Compartmentation Codes – NBC

NBCC - 3.1.8.1. - General Requirements

1) Any wall, partition or floor assembly required to be a fire separation shall
   a) except as permitted by Sentence (2), be constructed as \textit{continuous} element, and
   b) as required in this part, have a fire-resistance-rating as specified (see appendix A)

2) Openings in a \textit{fire separation} shall be protected with closures, shafts or other means in conformance with Articles 3.1.8.4-7.
Building & Fire Code Requirements

• Compartmentation Codes – **Fire Separations**
  
  NBC - *the fire separation should act as a barrier to the spread of smoke and fire until some response is initiated.*
  
  • Hourly Rated, “L” Rating
  
  • Quantified in IBC….not yet, NBC
    
    – <5 cfm/sf (IBC 2006)
    
    – < 50 cfm, 100sf of Wall Area (IBC 2009)
3.1.8.3 – Continuity

- The continuity of a fire separation shall be maintained where it abuts another fire separation, a floor, a ceiling, a roof or an exterior wall assembly. (Appendix A, 3.1.8.3)

- 9.10.9.2 Continuous Barrier
Compartmentation Codes – NBC

• **3.1.8.3 (4) Fire Separation Continuity** –
  The continuity of a fire separation where it abuts against another fire separation, a floor, a ceiling or an exterior wall assembly is maintained by filling all openings at the juncture of the assemblies with a material that will ensure the integrity of the fire separation at that location.

• **9.10.9.2 Continuous Barrier**
3.1.9.1. Fire Stopping of Service Penetrations

Except as required by Sentences (2) and (3), and permitted by sentences (4) and (5), penetrations of a fire separation or membrane forming part of an assembly required to have a fire resistance rating shall be

a) *sealed by a fire stop system* that, when subjected to the fire test method in CAN/UL-S115, “Fire Tests of Firestop Systems,” has an F rating not less than the fire-protection rating required for closures in the fire separation in conformance with Table 3.1.8.4., or *(50pa, plastics)*

b) *cast in place* (see Appendix A).

SEE ALSO 3.1.9.4, penetrations by combustible drain, waste and vent piping.
Compartmentation Codes – NBC

- Change for 2010....
- Definition of Fire Stop

‘System consisting of a material, component and means of support used to fill gaps between fire separations or between fire separations and other assemblies, or used around items that wholly or partially penetrate a fire separation’
Compartmentation Codes – NBC

3.1.9.1.Fire Stopping of Service Penetrations

2) Penetrations of a firewall or a horizontal fire separation that is required to have a fire-resistance rating in conformance with Article 3.2.1.2 shall be sealed at the penetration by a fire stop that, when subjected to the fire test method CAN/ULC-S115, “Fire Tests of Firestop Systems”, has an FT Rating not less than the fire-resistance rating of the fire separation.
3.1.9.1. Fire Stopping of Service Penetrations

3) Penetrations of a fire separation in conformance with Article 3.6.4.2 (2) shall be sealed by a fire stop that, when subjected to the fire test method CAN/ULC-S115, “Fire Tests of Firestop Systems”, has an FT Rating not less than the fire-resistance rating of the fire separation.
Compartmentation Codes – NBC

3.1.9.1. Fire Stopping of Service Penetrations

b) *cast in place* (see Appendix A).
   – Concrete, Grout…Full Thickness of the Assembly
Compartmentation Codes – NBC

4) Sprinklers are permitted to penetrate a fire separation or a membrane forming part of an assembly required to have a fire-resistance rating without having to meet the fire stop requirements of sentences (1) to (3), provided that the annular space created by the penetration of a fire sprinkler is covered by a metal escutcheon plate in accordance with NFPA 13, “Installation of Sprinkler Systems”.
5) Unless specifically designed with a fire-stop, fire dampers are permitted to penetrate a fire separation or a membrane forming part of an assembly required to have a fire-resistance rating without having to meet the fire stop requirements of Sentences (1) to (3), provided the fire dampers is installed in conformance with NFPA 80, “Fire Doors and Other Opening Protectives”
4) Combustible drain, waste and vent piping is permitted to penetrate a fire separation required to have a fire-resistance rating or membrane that forms part of an assembly required to have a fire-resistance rating, provided

a. the piping is sealed at the penetration by a fire stop that has an F rating not less than the fire-resistance rating required for the fire separation when subjected to the fire test method in CAN/ULC-S115, Fire Tests of Firestop Systems”, with a pressure differential of 50 Pa between the exposed and unexposed sides, with the higher pressure on the exposed side, and

b. the piping is not located in a vertical service space.
3.1.9.4 – Combustible Piping Penetrations
NEW for 2010....

2) *Combustible* water distribution piping is permitted to penetrate a *fire separation* that is required to have a *fire-resistance rating* without being incorporated in the assembly at the time of testing as required by Article 3.1.9.2, provided, the piping is protected at the penetration with a *fire stop* in conformance with Sentence (4).
3.1.5.16 – Combustible Piping Penetrations
NEW for 2010….  

3) Polypropylene pipes and fittings are permitted to be used for drain, waste and vent piping for the conveyance of highly corrosive materials and for piping used to distribute distilled or dialized water in laboratory and hospital facilities in a building required to be of non combustible construction provided:
Compartmentation Codes – NBC

3) Polypropylene pipes and fittings are permitted .... be of non combustible construction provided:

a) The building is sprinklered throughout

b) The piping is not located in a vertical shaft, and

c) Piping that penetrates a fire separation is sealed at the penetration by a ‘fire stop’ that has an FT rating not less than the fire-resistance rating of the fire separation when subjected to the fire test method CAN/ULC-S115, “Fire Tests of Firestop Systems”, with a pressure differential of 50 PA between the exposed and unexposed sides, with higher pressure on the exposed side.
Compartmentation Codes – NBC

• Compartmentation Codes - Penetrations of Fire Separations

• All penetrations of a fire separations must be fire stopped per CAN/ULC-S115 standard with an F Rating and similar FRR for closures

• All penetrations of a firewall must be fire stopped per CAN-ULC-S115 standard with FT rating and similar FRR for the fire separation.
Compartmentation Codes – NBC

- Fire Stopping not required around *fire dampers* penetrating a *fire separations* where installation listing specifies a clearance for operational reasons…
Compartmentation Codes – NBC

- Combustible Piping Penetrations

- Any size *combustible* pipe permitted to penetrate a *fire separation*
Compartmentation Codes – NBC

- Emergency Conductors

- Single Conductors >25mm in overall diameter
  - Not Grouped
  - Spaced a minimum of 300 mm apart
Compartmentation Codes – NFPA

• NFPA - Committees
  – NFPA 5000 – “Consensus Codes”

  - ULC/UL
  - Intertek
  - FM Approvals

*Systems Selection & Analysis…Not as easy as it looks…*
1. **FLOOR OR WALL ASSEMBLY**:
   A. Minimum 4-1/2" thick lightweight or normal weight concrete floor.
   B. U.L. classified concrete block wall (minimum 8" block).

2. **PENETRATING ITEM TO BE ONE OF THE FOLLOWING**:
   A. Maximum 20" diameter steel pipe.
   B. Maximum 6" diameter copper pipe.
   C. Maximum 6" diameter steel conduit.
   D. Maximum 4" diameter EMT.

3. **OPTIONAL**: Maximum 22" diameter steel pipe sleeve (Schedule 10 or heavier).

4. **MINIMUM** 4" thickness mineral wool (min. 4 PCF density) recessed 1/2" from top of sleeve.

5. **MINIMUM** 1/2" depth Hilti FS-One firestop sealant.

6. A generous bead of Hilti FS-One firestop sealant around outer perimeter of steel sleeve.

**NOTES**:

1. Maximum diameter of opening = 22".
2. Annular space = minimum 0", maximum 1-1/2".

    - *Engineering Judgment* – “EJ”
    - *Equivalent Fire Resistance Rated Assembly* – “EFRRRA”

- Based on engineering, *IFC Protocol*
1.03.5 - REFERENCES:

International Firestop Council – Manufacturers – firestop.org
IFC Guidelines for Evaluating Engineering Judgment
Guidelines

‘Construction industry professionals, building officials, fire officials, firestop contractors and other stakeholders need appropriate guidelines for evaluating and using such judgments.

As such, IFC developed Recommended IFC Guidelines for Evaluating FireStop Systems in Engineering Judgments.
IFC EJ Guidelines - Engineering Judgments for firestop systems should:

1. Not be used in lieu of tested systems when available;

2. Be issued only by a firestop manufacturer’s qualified technical personnel or in concert with the manufacturer by a knowledgeable registered Professional Engineer, Fire Protection Engineer, or an independent testing agency that provides listing services for firestop systems;

3. Be based upon interpolation of previously tested firestop systems that are either sufficiently similar in nature or clearly bracket the conditions upon which the judgment is to be given. Additional knowledge and technical interpretations based upon accepted engineering principles, fire science and fire testing guidelines (e.g. ASTM E 2032 – Standard Guide for Extension of Data from Fire Endurance Tests, ULC Subject C263E – Criteria for Use in Extension of Data from Fire Endurance Tests, or ASTM E2750 – Standard Guide for Extensions of Data for Penetration Seals) may also be used as further support data;
ICF EJ Guidelines

Engineering Judgments for firestop systems should:

4. Be based upon full knowledge of the elements of the construction to be protected, the understanding of the probable behavior of that construction and the recommended firestop system protecting it were they to be subjected to the appropriate Firestop Standard Fire Test method for the rating indicated on the Engineering Judgment;

5. Be limited only to specific conditions and configurations upon which the engineering judgment was rendered and should be based upon reasonable performance expectations for the recommended firestop system under those conditions;

6. Be accepted only for a single, specific job and project location and should not be transferred to any other job or project location without thorough and appropriate review of all aspects of the next job or location’s circumstances.
ICF EJ Guidelines - Basic Presentation Requirements

Proper EJ’s should:

1. Be presented in appropriately descriptive written form with or without detail drawings where appropriate;

2. Clearly indicate that the recommended firestop system is an EJ;

3. Include clear directions for the installation of the recommended firestop system;

4. Include dates of issue and authorization signature as well as the issuer’s name, address and telephone number;

5. Reference tested system(s) upon which design (EJ) is based on;

6. Identify the job name, project location and firm EJ is issued to along with the non-standard conditions and rating supported by the EJ;
IFC EJ Presentation Guidelines – What’s Seen?

7. Have proper justification (i.e. UL, Intertek or other independent laboratory system(s) and or opinions);

8. Provide complete descriptions of critical elements for the firestop configuration. These should include, but not be limited to the following:

a. Basic, Common
   - Type(s) of assembly used or being penetrated;
   - Rating supported by the EJ.

b. Through Penetrations
   • Penetrating item(s) (type, size, etc.);
   • Annular space requirements, (minimum, maximum, actual, nominal, etc.)
   • Opening size;
   • Firestop product(s) to be used, type and amount (thickness if applicable);
   • Accessory item(s) (i.e. anchors, backing material, etc.)

c. Joints
   • Joint Width (installed width, nominal)
   • Movement Capability;
   • Movement Class (thermal wind sway, seismic);
   • Accessory item(s) (i.e. insulation type, thickness and compression, etc.)
d• Duct Enclosure Systems – SEE www.Firestop.org

e• Firestop System – annular space dimensions, floor/wall construction, design number, components, installed thickness.

f. Perimeter Fire Barrier Systems –
   - Type(s) of assembly used or being penetrated;
   - Hourly Rating required
   - Closest Listed System upon which the EJ is based
   - Joint Width
   - Static or Dynamic
   - Safing Insulation Types), thickness and compression, etc.

- Five Basic Principles
  1. Mechanical Attachment of the Spandrel Insulation
  2. Protection of the Mullions
  3. Compression Fitting and Orientation of the Safing Insulation
  4. Installation of a Reinforcement Member(s), stiffener, at the safe-off area behind the spandrel insulation.
  5. Firestop Coating, type, thickness,
Continuity Head-of-Wall Joints

- Joint Width, (installed width, nominal)
- Movement Capability
- Movement Class – (thermal, wind sway, seismic)
- Accessory Item(s) (i.e. insulation type, thickness, compression, etc.)

IFC recommends that these guidelines be considered when evaluating whether any firestop system engineering judgment meets minimal requirements. Questions concerning the EJ request should be addressed to the initiator of the judgment.

1. FM, UL/ULC Company Audit of Management System (MS)

- Employee Training & Education
- Systems Selection
- Communicate systems to Field
- Material Controls
- Systems installation “protocol”
- Labeling
- Record keeping - Variance Procedures
- Non-Conformances
- Documentation
- Project closeout
2. *Company MS Jobsite Audit by ULC, FM or UL*

- Verification of firestop systems Processes
- Verify Management System Works
- Verify Company “communication”
  - Office to field, field to office
- “Culture of Quality…”

» Adler Photo
3. DRI – Company Appoints DRI if ….

• Pass Rigorous Firestop Examination
  – FCIA Firestop Manual of Practice
  – Firestop Systems Selection & Protocol
  – Management System Knowledge

• Keep CEU’s – 6 FM, 10 UL, ea. 3 yrs.

• Retested every 3 years (FM Only)

• One DRI per Approved Contractor Location
4. Annual Audit
FM 4991 UL / ULC
Contractor Company Personnel

• Continued satisfactory performance
  • Quality Manual Implementation
• Documented - Archived record keeping
• Employee Training Documentation
• Jobsite Visit
• DRI CEU Verification
• Find @www.FCIA.org
UL-ULC/FM 4991 Contractor Company Benefits

Quantified Differentiation …

– Focus on the Company & Individual
– Investment in Company Procedures
– Investment in People Education
– Investment in FCIA Manual of Practice
  • Project Successful Proven Contractor
  • Education, Training, Accountability
  = Reduced Risk – Life, Property, Business
Certificates

Mr. Randy Perry
Adler Firestopping Ltd.
#23, 53016 Hwy 60
Acheson, AB T7X 1M9
Canada

Re: Qualified Firestop Applicator

As the firestop manufacturer with more UL and ULC Class 1 Firestop System Coverage than any other, we are intimately familiar with UL and ULC's QFC Program. We recognize the program as one of the best-in-class, third-party quality assurance methods available to building project decision-makers to help ensure applicator quality. As such, we fully endorse the program and those applicators that have invested heavily to earn their way to become a member in this elite group of professionals.

It is our understanding that Adler Firestopping Ltd. is a ULC (Underwriters Laboratories of Canada) Qualified Firestop Contractor (QFC) in good standing. This can be verified at the bottom of the page at the following link:
http://www.ul.com/products/offering/industry/building/products/firestop/contractor

Moreover, Randy Perry has successfully attended our intensive, two-day FIT Level II program, taken the exam, earned a passing score and is within the two-year expiry period before renewal will be required. A copy of his certificate can be made available upon request.

Regards,

John Hurley
Regional Manager, Western US and Canada

Underwriters Laboratories of Canada reserves the right to void this certificate at any point. This certificate does not indicate compliance with any ULC Product Certification Program. For additional information regarding the Qualified Firestop Contractor Program, please visit www.ul.ca/contractor.

Firestop Installation & Inspection

Firestop Installation & Inspection

- ASTM E 2174/ASTM E 2393 -
3.06 Quality Assurance Options

- **Contractor Self Inspection**
  - Verify Management System validity
  - Not 2%, 10%
  - Required for FM & UL, ULC Contractors

- **Manufacturer Inspection**
  - Does not exist … Survey, maybe

- **ASTM E 2174 & ASTM E 2393 Inspection**
  - Independent 3rd Party
  - Destructive or Non Destructive
  - Specified Frequency
REFERENCE in 1.03 A&B
ASTM E 2174 - ASTM E 2393

• “Standard Practice for On-Site Inspection of Installed Fire Stops – Penetrations - Joints”
  – Standard Inspection Procedure
  – Special Inspection Agency Companies
  – Other Qualified Firms
  – Report to Building Owner, Fire Marshals & Code Officials
Inspection in Codes
ASTM E 2174 - ASTM E 2393

• National Building Code of Canada - Not yet
• 2012 IBC - CH 17 – Special Inspections
  • Buildings 75’ & higher above lowest Fire Dept. Access
  • Occupancy Type III, IV, Chapter 16 Table 1604.5
• NFPA 101 / 5000 - Chapter 8 - Annex
• Abu Dhabi International Building Code
Inspection Firm & Individual Qualifications

• ASTM E 2174 - ASTM E 2393
  – ‘Independent of, and Divested from’ Installing firm, Distributor, Manufacturer, Competitor, Supplier…

  – ‘Not a Competitor’ of the Installer, contractor, manufacturer, or supplier ….

  – Submit notarized statements to above…
Inspection Firm & Individual Qualifications

ASTM E 2174 - ASTM E 2393

• Inspector Personnel meet at least one criteria.....
  – 2 years experience (Construction, Field), education, and credentials acceptable to AHJ
  – Accredited by AHJ
  – Meet ASTM E699
  – Accredited to IAS AC 291

• IAS AC 291 – Company & Individual
Inspection Agency and Individual Qualifications - IAS AC 291

• Inspector Firm shall have at least one staff..
  – PASS UL or FM Firestop Exam
  – 1 year Quality Assurance

Or...

  – PASS UL/FM Firestop Exam, and PE, FPE, Registered Architect, or
  – PASS UL/FM Firestop Exam, and Education by Certified Agency

Specify IAS AC 291 @ 1.03 References, 1.06 Quality Assurance.
Inspection Process
ASTM E 2174 - ASTM E 2393

• Pre Construction Meeting
  – Review Inspection Documents
    • Manufacturer Product Data Sheets
    • Tested and Listed Systems & EJ/EFERRA’s
      – 1.03-5 References – IFC Guidelines
  – Review Documents – Identify Conflicts
  – Review Materials – SYSTEMS
    • ULC S 115, ASTM E 2307 Systems
    • ASTM E 814 or UL 1479- ASTM E 1966, UL 2079
Inspection Process
ASTM E 2174 - ASTM E 2393

• Pre-Construction Meeting
  – Mock Ups
  – Destructive Testing
  – Installation Measurements
  – Discuss Inspection Method

• Meeting Required
  – During/Post Inspection Methods
Inspection Methods
ASTM E 2174 - ASTM E 2393

• During Construction
  – Random witness, Each Floor
    • 10%, each type of Penetration Firestop, no less than one per floor
    • 5% of Total Lineal Feet of Fire Resistance Rated Joint System, each type

Adler Photo
Inspection Methods

ASTM E 2174 - ASTM E 2393

• Post Construction - Destructive Testing
  – Minimum 2% , no less than 1, each type per 10,000 SF of floor area
  – Minimum 1 / 500 LF of Joint Area, mandatory
  – If 10% variance per firestop type
    – Inspection stops
    – Installer inspects, repairs
    – Inspector reinspects
Inspection Methods
ASTM E 2174 - ASTM E 2393

• Both Methods…
  – If 10% variance per firestop type
    – Inspection stops
    – Installer inspects, repairs
    – Inspector reinspects
  – Inspector Shall not Supervise Workers…
  – Inspect @ Firestop Installation Start
Inspection Forms
ASTM E 2174 - ASTM E 2393

• One for each type of firestop
• Submit 1 day after Inspection to Authorizing Agency
• Numbered – Controlled
• Required – During/Post Construction Methods
Inspection Final Report
ASTM E 2174 - ASTM E 2393

- Name, address, location – project, installer, inspector

  **2.2.1.2 – Damage to Fire Separations** – where fire separations are damaged so as to affect their integrity, they shall be repaired so that the integrity of the fire separation is maintained…

- **FCIA Manual of Practice – Appendix, Maintenance**
  FCIA recommends Barrier Management for Effective Compartmentation and Structural Protection

*Includes Fire Dampers, Fire Doors…and Continuity*
SECTION 4.5.8 Maintenance, Inspection, and Testing.

4.5.8.1 Whenever or wherever any device, equipment, system, condition, arrangement, level of protection, fire-resistive construction, or any other feature is required for compliance with the provisions of this Code, such device, equipment, system, condition, arrangement, level of protection, fire-resistive construction, or other feature shall thereafter be continuously maintained in accordance with applicable NFPA requirements or requirements developed as part of a performance-based design, or as directed by the AHJ. [101:4.6.12.1]
4.5.8.2 No existing life safety feature shall be removed or reduced where such feature is a requirement for new construction. [101:4.6.12.2]

4.5.8.3* Existing life safety features obvious to the public, if not required by the Code, shall be either maintained or removed. [101:4.6.12.3]

4.5.8.4 Any device, equipment, system, condition, arrangement, level of protection, fire-resistive construction, or any other feature requiring periodic testing, inspection, or operation to ensure its maintenance shall be tested, inspected, or operated as specified elsewhere in this Code or as directed by the AHJ. [101:4.6.12.4]

4.5.8.5 Maintenance, inspection, and testing shall be performed under the supervision of a responsible person who shall ensure that testing, inspection, and maintenance are made at specified intervals in accordance with applicable NFPA standards or as directed by the AHJ. [101:4.6.12.5]
SECTION 703
FIRE-RESISTANCE-RATED CONSTRUCTION

703.1 Maintenance. The required fire resistance rating of fire-resistance rated construction (including walls, fire stops, shaft enclosures, partitions, smoke barriers, floors, fire resistive coatings and sprayed fire resistant materials applied to structural members and fire resistive joint systems) shall be maintained. Such elements shall be visually inspected by the owner annually and properly repaired, restored or replaced when damaged, altered, breached or penetrated.

Openings made therein for the passage of pipes, electrical conduit, wires, ducts, air transfer openings, and holes made for any reason shall be protected with approved methods capable of resisting the passage of smoke and fire.
Chapter 1, SECTION 21
Firestopping

21.15.2 The required fire resistance rating of installed firestop systems shall be **visually inspected by the owner or owner’s inspection agency annually**. Damaged, altered or breached firestop systems shall be properly repaired, restored or replaced to comply with applicable codes as per the guidelines of Civil defense.

21.15.3 Any new **Openings** made therein for the passage of through penetrants, **shall be protected with approved firestop system** to comply with applicable codes as per the guidelines of Civil defense.
“TOTAL FIRE PROTECTION”

• Effective Compartmentation
  – Fire Barriers, Fire Walls/Floors, Smoke Barriers
  – Firestopping, Fire Dampers, Swinging and Rolling Fire Doors, Fire Rated Glazing

• Detection & Alarm Systems

• Sprinkler Suppression Systems

• Education & Egress–
  – Building Owners & Managers, Building Occupants and Firefighters
FCIA DIIM & Firestopping
@ FCIA Symposia

Proper ‘DCIIM’ Means Reliable Systems…

1. Properly **Designed** - A/E - Consultant
   - Tested and Listed Systems, FCIA Member Mfr’s., Compartments per IBC, NFPA Codes, SUBMITTALS….Specified (CCS, CDT, RSW)

2. Properly **Coordinated & Installed**
   - FCIA Member, FM 4991, or UL Qualified Contractors

3. Properly **Inspected**
   - ASTM E 2174 & ASTM E 2393, by IAS Qualified Inspectors at IAS AC 291 Accredited Inspection Firms

4. Properly **Maintained & Managed** –
   - FCIA Member, FM 4991, or UL Qualified, IAS Accredited Firms
